

NL-6 1/M3

Mini Night Sight (Li-Or)

- Lightweight, compact configuration
- 3X magnification
- Wide field of view
- Fixed focus objective lens
- Illumination: Red open-cross reticle
- Remote control cable switch (PTT)
- Low battery indicator
- Submersible to 66 ft (20 m)

New Noga Light

NL-61/M3

Mini Night Sight (Li-Or)

The New Noga Light NL-61/M3 (Li-Or) is a new mini night sight system for the individual soldier developed for a variety of ground-based night operations and urban warfare. Designed especially for assault rifle and submachine gun, the NL-61/M3 uses an ANVIS style Gen II or Gen III image intensifier tube.

The Li-Or has 3X magnification configuration and weighs less than 750 gr. Its innovative design enables users to lower the distance between the

weapon and the night sight LOS, resulting in a more comfortable aiming and firing position. Precision aiming and firing is aided by precise azimuth and elevation adjustment. An illuminated open red cross reticle with five brightness level adjusters maintains extremely high resolution, allowing precision fire control for target engagement at distances greater than 300 meters.

The Li-Or can be operated by pressure switch (PTT), which prolongs battery usage.

SPECIFICATIONS

NL-61M3 Features	X3
On-axis resolution	3.9 lp/mard
Field of View (degrees)	13
Objective EFL	75mm
Objective Focus Range	Fixed - from 25m to infinity
Eyepiece Focus(Diopter)	+2 to -4.5
Eye relief	24mm
Reticle	Illuminated Open Red Cross
Reticle adjustment	0.145 mrad / click
Operational Temperature Range	-40 °C to + 55 °C
Storage Temperature Range	-40 °C to + 68 °C
Submersion	20m (66ft) for 2 hours
Weight (with picatinny mount & battery)	900gr
Distance between NVIS Line of Sight (LOS) to weapon Mount of comfortable Aiming and firing position	46mm

Li-Or. Compact size, big performance.
